

Charts for NetSuite

A great way to visualize your saved searches

This native SuiteApp provides your NetSuite account with a library of brand new chart types. The data for each chart is collected via one or multiple saved searches. In other words, you are now able to visualize your data in the best possible way!

Make the right decisions for your business

The charts can be published on any dashboard in your NetSuite account, whether it's your home dashboard or the customer dashboard. Charts can even be placed in your forms! Visualizing your data in charts on your selected dashboards will provide an real-time overview of your business, enabling you to make informative decisions at any given time

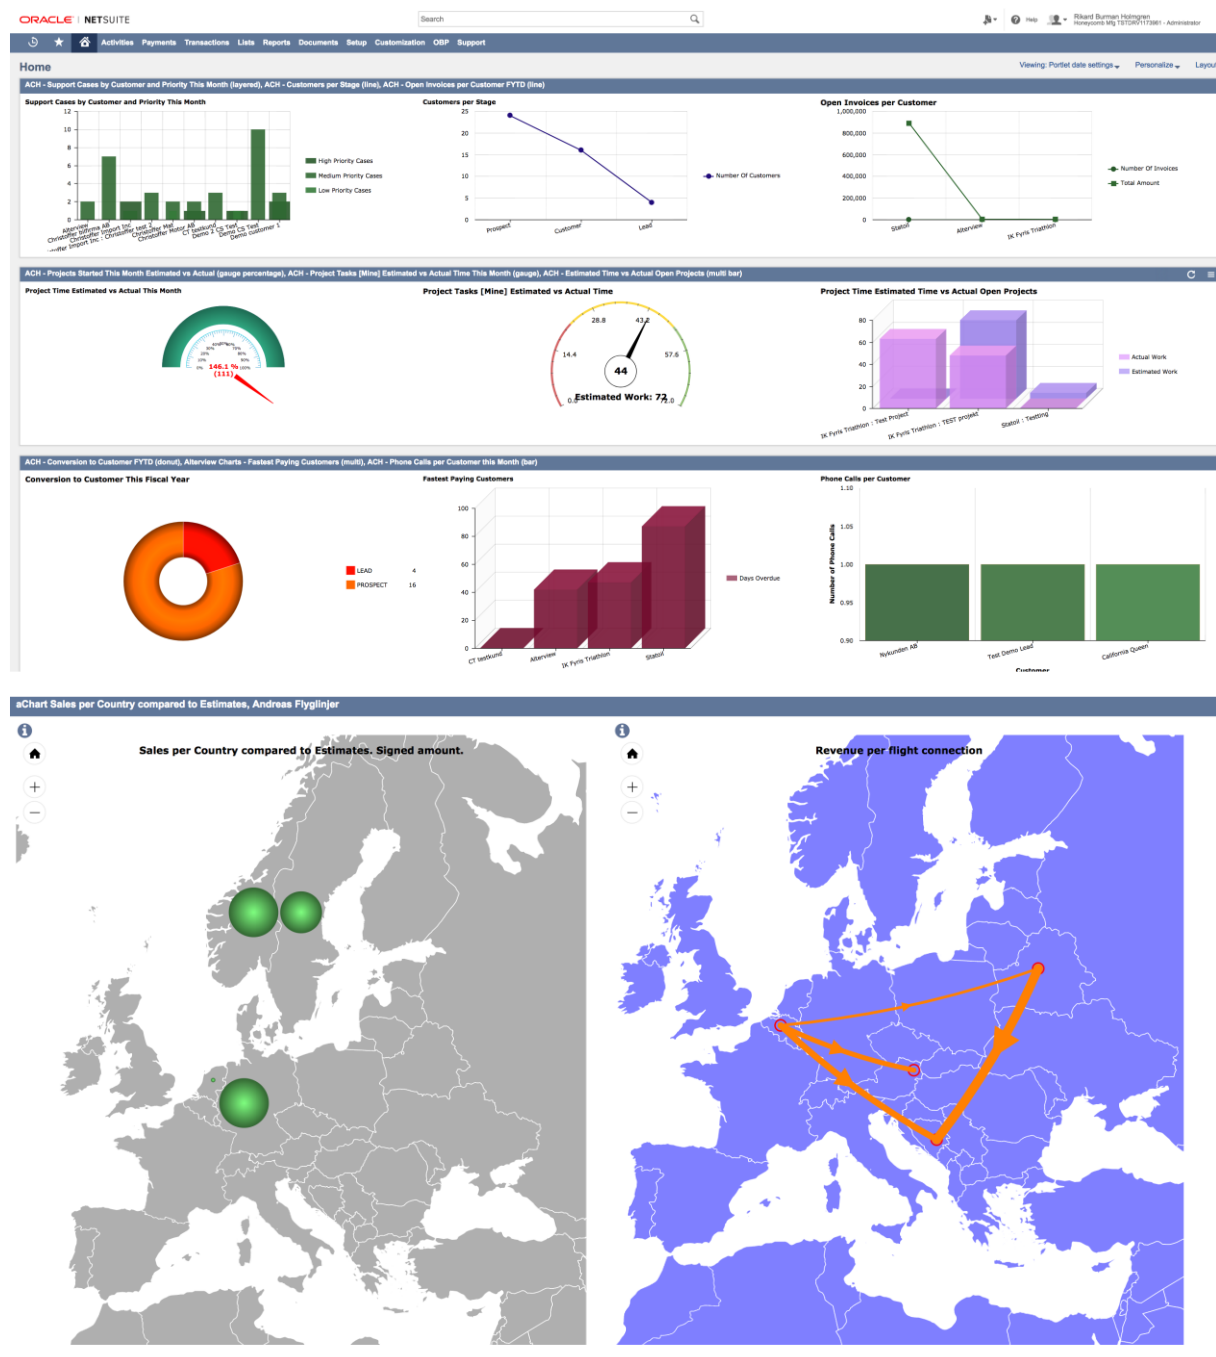

Example of the dashboard with new charts included

Drill-down into the Saved Search

Each chart provides the possibility to drill-down into the saved search from which the data is collected, meaning you can always reach the details behind the chart!

No coding

The data source in the charts is your own saved searches. Within a configuration record you decide which chart type and which saved searches you want to use as data source. No coding at all involved!
