

Alterview Charts for NetSuite is a Native SuiteApp developed by Alterview Net Solutions AB, Swedish 5 star NetSuite partner with extensive experience in building sophisticated NetSuite solutions since 2007.

Brand new chart types for NetSuite

The SuiteApp provides your NetSuite account with a library of brand new chart types. Available charts include: Bar, Stacked Bar, Multiple Bar, Area, Line, Donut, Funnel, Gauge meters, Datagrid, Maps etc.

Predefined charts

Alterview Charts includes predefined charts for each available chart type. The predefined charts provides KPIs for a variety of areas and are ready to be used as is. Alternatively, use the predefined configurations as inspiration when building your very own charts.

Charts from Saved Searches

To configure a new chart, simply select a saved search from which the data should be collected. Of course, it is also possible to merge several saved searches into one chart!

BI-center on your NetSuite Dashboard

Once the chart configuration is in place it is easy to publish your selected charts on the dashboard, simply by adding a custom content portlet.

All data that is searchable in NetSuite can now be visualized on your dashboards. Or why not configure your own BI-center within your NetSuite account.

Native SuiteApp - Security

The solution only uses its own tables and files, and does not affect other NetSuite tables or configurations in the system. In other words, you can feel confident that the SuiteApp does not cause any problems in other parts of the system.

Alterview Charts for NetSuite

- a great way to visualize your saved searches

This native SuiteApp provides your NetSuite account with a library of brand new chart types. The data for each chart is collected via one or multiple saved searches. In other words, you are now able to visualize your data in the best possible way!

Make the right decisions for your business

The charts can be published on any dashboard in your NetSuite account, whether it's your home dashboard or the customer dashboard. Charts can even be placed in your forms! Visualizing your data in charts on your selected dashboards will provide an real-time overview of your business, enabling you to make informative decisions at any given time.

The screenshot shows a NetSuite dashboard titled "Alterview Charts". At the top, there is a search bar and a navigation menu with links like Activities, Payments, Transactions, Lists, Reports, Documents, Setup, Customization, OBP, and Support. Below the menu, there is a "Save" button and a "Screenshot" button. The main area of the dashboard is a grid of charts. The charts include:

- A bar chart with green bars.
- A funnel chart.
- A pie chart.
- A gauge meter.
- A world map with colored regions.
- A map of Europe.
- A stacked bar chart.
- A line chart.
- A donut chart.
- A line chart with a background grid.
- A bar chart with yellow bars.

 To the right of the dashboard grid, there are two more sections of charts:

- "Project Management" section with charts for "Project Tasks" and "Project Details".
- "Mobile Project Overview" section with charts for "Mobile Project Status" and "Mobile Project Details".

Example of the dashboard with new charts included.

Drill-down into the Saved Search

Each chart provides the possibility to drill-down into the saved search from which the data is collected, meaning you can always reach the details behind the chart!

Alterview Charts Professional Edition

In the Professional Edition of Alterview Charts the SuiteApp Alterview Navigator is included. The Navigator is a filter portlet on the dashboard enabling you to filter down the content in the charts, by adding extra criteria to the saved searches in the background.

Charts for NetSuite

Alterview Charts for NetSuite

- Make the right decisions for your business

It has never been easier to analyze your data in NetSuite! With Alterview Charts for NetSuite you can provide your NetSuite users with an intuitive and powerful dashboard with informative charts, with full drill-down-functionality everywhere.

No coding

The data source in the charts is your own saved searches. Within a configuration record you decide which chart type and which saved searches you want to use as data source. No coding at all involved!

Alterview Charts for NetSuite - a Native SuiteApp from Alterview

Alterview Charts for NetSuite is a native SuiteApp, built for NetSuite from the very beginning. It runs completely inside your own NetSuite account, with your own data. You handpick which users should have access to the charts, and with NetSuite standard security features within the platform you can feel confident that the right data is presented for the right person.
